Aadi Shah

Mumbai, Maharashtra, India | +91-9819427909 | shahaadi285@gmail.com | LinkedIn | GitHub | LeetCode | Portfolio

Education

Parul University *Vadodara, Gujarat, India*
Bachelor of Technology in Computer Science & Engineering *Expected Graduation: May 2027*

Technical Skills

Languages: C++, C#, Kotlin, Java, JavaScript, TypeScript, Python, SQL, Swift
Systems & Performance: CUDA, cuBLAS, Gemini API
Frameworks & Libraries: React.js, Node.js, Express.js, ASP.NET Core, Jetpack Compose, Next.js
Databases: MongoDB, MySQL, PostgreSQL, Redis, Firebase
Developer Tools: Git, CMake, Android Studio, Docker, GitHub Actions, Postman, Azure

Projects

CUDADL | Modern C++17, CUDA 13.x, cuBLAS, CMake GitHub

- Built a stream-ordered GPU memory pool (cudaMallocAsync, RAII-managed buffers) that cut allocation latency up to 253× versus raw cudaMalloc/cudaFree, benchmarked across 1MB-64MB buffer sizes.
- Hand-wrote a Tensor Core GEMM kernel (nvcuda::wmma, FP16/BF16 mixed precision) reaching up to 97% of cuBLAS's throughput and a 4.9× speedup over a naive CUDA implementation.
- Built a mixed-precision tensor framework (FP32/FP16/BF16) and fused Bias+ReLU/GELU kernels, giving up to a 1.6× speedup.

CloudPrint | C#, .NET 10, PostgreSQL, Azure Service Bus, Docker GitHub

- Architected a distributed print-management platform in .NET 10 with a REST API, PostgreSQL persistence, and an Azure Service Bus messaging overlay, using durable database polling as an automatic recovery path for failed or duplicate delivery.
- Engineered lease-based job claims, X-Idempotency-Key enforcement, and exponential-backoff retries to guarantee exactly-once printing under duplicate message redelivery or worker failover.
- Built a real-time web dashboard with a live pipeline visualizer, fleet KPIs, and a configurable chaos-testing lab (failure-rate injection, concurrent batch dispatch) to validate worker throughput and fault tolerance.

CollabLearn | React, Node.js, MongoDB, Gemini API GitHub

- Built a full-stack MERN skill-learning platform with AI-powered course recommendations via the Gemini API, deployed live on Vercel.
- Cut Gemini API response latency 30% by designing targeted MongoDB indexes, directly improving perceived app performance.
- Implemented Google OAuth2 authentication and Redux-based state management to support a production-style full-stack architecture.

GoldenHour | Kotlin, Jetpack Compose, Hilt, MVVM GitHub

- Built an Android prototype that guides bystanders after a road accident: GPS location, victim triage, one-tap 108/112 calls.
- Used MVVM, Hilt DI, and Coroutines/Flow, with a simulated hospital dashboard showing ambulance telemetry.

Kompass | Swift, SwiftUI, MapKit, CoreLocation GitHub

- Built a fully offline iOS navigation app in SwiftUI that tracks position using only on-device GPS, with no network calls.
- Replaced MapKit's server-based directions with a custom Haversine routing engine that computes routes, ETA, and steps locally.

Experience

Software Engineering Intern Hybrid, Mumbai
ZM Lifestyle May 2025 – June 2025

- Designed, implemented, and shipped React.js features for the core product dashboard within a five-engineer Agile team.
- Diagnosed and resolved 10+ defects in the legacy codebase, improving application stability by 15% and reducing incoming error reports.
- Collaborated cross-functionally through daily standups and peer code review as part of an established production engineering process.

Achievements & Certifications

LeetCode: Max Contest Rating 1780 | Solved 470+ problems across Arrays, Trees, Graphs, Dynamic Programming, and Greedy.
Certifications: App Development with Swift – Associate (Certiport, Oct 2026, 925/1000) · IBM AI Fundamentals (Sep 2025) · AWS Academy – Cloud Foundations (Sep 2025).
